

How to calculate unweighted GPA?

STEPS:

- Find your grades on Skyward
- Do a quick addition based on each letter grade:
 - For each...
 - A (90-100) = 4 points
 - B (80-89) = 3 points
 - C (70-79) = 2 points
 - D (60-69) = 1 point
- Divide that by the number of classes
(Do not include Valencia or FLVS, only count what you see on Skyward)
- Done! You have your unweighted GPA!

HOW DOES THAT LOOK?

Peter Parker's Grades:

• AP World History	88
• Chorus 4	100
• German 2	75
• English Hon 2	97
• Chemistry Hon 1	71
• Princ Engineering	100
• AP Calculus	91

Calculation:

$$\begin{array}{l} \bullet B = 3 \\ \bullet A = 4 \\ \bullet C = 2 \\ \bullet A = 4 \\ \bullet C = 2 \\ \bullet A = 4 \\ \bullet A = 4 \\ \hline 23 \end{array}$$

$$23 / 7 = 3.28 \text{ GPA}$$
